Ten to fifteen hours should be enough I would think.

We have two PE's on staff today. We could certainly turn the plans around in that time. The main

assumption would be that the materials on site will perform as new which should not be a stretch. We usually charge \$150 per hour for that kind of work.

Matt Francis <m.francis@erllc.com> wrote:

If we were to want PE stamped drawings of the support structures to meet OSHA shoring requirements is that something you could provide? If so do you have an estimate of cost and could it be done in time to mobilize by 9/10? The question arises primarily due to the portal structure being seen by some as equivalent to a field fabricated shoring system and therefore requiring blessing by a PE much like when you use something other than a manufactured trench box in an excavation.

Thanks
